Infrastructure Blueprint v3 – Web-First Architecture

## 1. Architecture Overview

Web-First Infrastructure Model using separated portals: /admin, /agent, /landlord, /tenant.

Stack: Next.js (App Router), Supabase (Postgres + Auth + Storage), Row-Level Security enabled.

All listings must be verified before going live.

## 2. SQL-Ready Core Schema (Production Structure)

users (id, email, role, verification\_status, account\_status, created\_at).

landlords (id, user\_id, identity\_verified, ownership\_verified, public\_display\_name).

agents (id, user\_id, kyc\_verified, reputation\_score, suspension\_count).

tenants (id, user\_id, reputation\_score).

properties (id, owner\_id, rent\_amount, inspection\_fee, status).

agent\_property\_authorizations (property\_id, agent\_id, authorization\_status).

inspection\_fee\_rules (city, area, min\_fee, max\_fee).

viewings (property\_id, tenant\_id, agent\_id, status).

applications (property\_id, tenant\_id, status).

reputation\_logs (user\_id, event\_type, score\_delta).

audit\_logs (actor\_id, action\_type, entity\_type, entity\_id).

## 3. Role-Based Access Control (RLS Strategy)

Agents can only create listings linked to verified landlords.

Landlords can only approve agents linked to their own properties.

Tenants can only view approved/live listings.

Admins have full moderation control.

All actions logged in audit\_logs table.

## 4. Verification Workflow States

Agent: Submitted → Identity Review → Approved / Rejected.

Landlord: Submitted → Identity Review → Ownership Review → Approved.

Property: Draft → Pending Review → Approved → Live → Suspended.

Violations: Warning → Temporary Suspension → Permanent Ban.

## 5. Web Route Architecture

Public: /, /listings, /listing/[id], /login, /signup.

Tenant: /tenant/dashboard, /tenant/viewings, /tenant/messages.

Agent: /agent/dashboard, /agent/listings, /agent/kyc.

Landlord: /landlord/dashboard, /landlord/properties, /landlord/authorizations.

Admin: /admin/dashboard, /admin/verifications, /admin/properties/review.

## 6. Inspection Fee Regulation Engine

Inspection fees validated against inspection\_fee\_rules before approval.

System rejects listings outside allowed fee range.

Repeat violations trigger suspension review.

## 7. 30/60/90-Day Execution Plan (Web First)

Days 1–30: Project setup, schema implementation, authentication, RLS policies.

Days 31–60: Agent & Landlord dashboards, property workflow, admin verification tools.

Days 61–75: Viewing system, reputation engine, audit logging.

Days 76–90: Private Lagos beta launch, manual onboarding, monitoring.

## **8. Future Infrastructure Expansion**

Escrow and rent payment integration.

Digital lease contracts.

Tenant rental scoring.

Maintenance marketplace integration.
