

Nigeria Verified Rental Infrastructure

Version 2 – Full Architecture & Execution Blueprint

1. Core Database Schema (High-Level Structure)

Users Table: id, role (landlord/agent/tenant/admin), verification_status, reputation_score, created_at.

Landlords Table: user_id (FK), identity_verified, public_display_name_optional.

Agents Table: user_id (FK), license_info_optional, verified_status, suspension_status.

Tenants Table: user_id (FK), profile_completion_status.

Properties Table: id, owner_id (FK), address, area, rent_amount, status (draft/pending/approved/live).

Agent_Property_Link Table: property_id (FK), agent_id (FK), authorization_status.

Viewings Table: property_id, tenant_id, agent_id, scheduled_time, status (booked/completed/no-show).

Inspection_Fees Table: area_name, min_fee, max_fee.

Applications Table: property_id, tenant_id, status.

Reputation_Log Table: user_id, event_type, score_delta, timestamp.

Event_Log Table: actor_id, action_type, entity_type, entity_id, timestamp.

2. Role Permission Matrix

Landlord: Create property, approve agent authorization, view analytics, manage listing visibility.

Agent: Create draft listing (must link verified landlord), schedule viewings, manage tenant communication.

Tenant: Search listings, book viewings, submit applications.

Admin: Approve verifications, monitor inspection fee compliance, suspend accounts.

3. Verification Workflow

Agent Verification States: Submitted → Identity Review → Approved / Rejected.

Landlord Verification States: Submitted → Identity Review → Ownership Review → Approved.

Property Approval States: Draft → Pending Review → Approved → Live.

Violation States: Warning → Temporary Suspension → Permanent Removal.

4. Inspection Fee Regulation Engine Model

Each property must select an inspection fee within predefined area range.

System validates fee against Inspection_Fees table.

Excessive reporting triggers automated admin review.

Repeat violations result in badge removal or suspension.

5. Reputation Engine Logic

Positive events: Completed viewing, successful lease, verified compliance.

Negative events: No-show, policy violation, fee abuse, scam report.

Reputation score dynamically adjusted via Reputation_Log table.

High reputation unlocks premium placement.

6. Revenue Model

Agent Subscription Tiers (Basic / Pro / Elite).

Verification Fee (Agents and Landlords).

Featured Listings Promotion.

Future: Escrow transaction percentage and tenant screening services.

7. 90-Day Execution Roadmap

Days 1–30: Finalize schema, build authentication, role-based access control.

Days 31–60: Property management system, verification workflows, inspection engine.

Days 61–75: Reputation engine, admin dashboard, manual onboarding pipeline.

Days 76–90: Private Lagos beta launch, onboard initial agents and landlords.

8. Long-Term Expansion

Escrow & Rent Collection System.

Digital Lease Contracts.

Tenant Credit & Rental Scoring.

Maintenance Marketplace.

Insurance & Rent Financing Partnerships.
